EDUCATIONAL APPS LAB

Check-In Staff Quick Guide

For staff operating the currently live Volunteer and Participant scanning stations.

Open the right station

1. Sign in to VolunteerHQ and open **Opportunities**.
2. Open the event record.
3. Use **Event Day Scanning Station** for volunteers.
4. Use **Participant Scanning Station** for participants and groups when participant registration is enabled. Never mix the two stations.

Scan with the USB scanner

1. Connect the wired scanner. It behaves like a keyboard.
2. Keep the correct station open and click the scanner input if needed.
3. Choose **Check in** or **Check out** before scanning.
4. Scan the credential from the attendee's phone. Wait for the on-screen result before scanning the next person.

Manual attendance

1. Use the live roster when a credential is unavailable or difficult to scan.
2. Match the person carefully using name, school, grade, or email as shown.
3. Select **Check in** or **Check out** on that person's row.
4. For a group QR, the currently live station identifies the group; confirm individual participants in the roster rather than recording one shared attendance entry.

If something goes wrong

1. Wrong QR type: move to the correct Volunteer or Participant station.
2. Already checked in / not checked in: verify the station mode and person before changing anything.
3. Scanner trouble: use manual roster controls. Do not repeatedly scan the same code.
4. Internet trouble: do not promise that attendance saved unless the station shows confirmation.

Privacy
Show only the information needed to identify and check in the attendee. Never read guardian or emergency contact information aloud.

Currently being improved
Duplicate-scan protection, group batch actions, participant search, and walk-in tools are under active development and should not be treated as deployed until the organizer confirms an update.
