Organizer Quick Guide

For event owners, administrators, and coordinators using the currently live VolunteerHQ organizer workspace.

Create or configure an event

1. Sign in and select **Create opportunity**, or open an existing opportunity and choose **Edit opportunity**.
2. Complete event details, dates, times, locations, volunteer setup, and branding.
3. On the Registration step, turn on **Accept event participants** when needed.
4. Enable **Individual / family**, **School / group**, or both. Set participant capacity and required school, grade, guardian, emergency, checkout, walk-in, and credential options.
5. Publish or save the opportunity.

Share the public page

1. Open the opportunity and select **Public page**.
2. Participants use **Attend the event**; volunteers use **Help with the event**.
3. Test both enabled registration paths before distributing the link.

Prepare for event day

1. Open the event record and verify volunteer and participant counts separately.
2. Use the Volunteer Event Day station for volunteer QR credentials.
3. Use the Participant Scanning Station for participant/group credentials.
4. Keep manual roster controls available at every station and confirm each device is signed in before doors open.

Monitor records

1. Use **Volunteers** for volunteer records and **Participants** for participant records.
2. Do not use participant attendance for volunteer service credit, letters, or certificates.
3. If a registration or scan needs correction, document the reason and restrict changes to authorized staff.

Currently live
Event participant settings, family/group public registration, separate participant records, credentials, participant scanning, and individual attendance are deployed.

Still under development
CSV roster import, advanced participant reports, confirmation email delivery, granular event staff assignments, walk-in tools, and full family/group batch attendance. Do not promise these until the deployment is confirmed.
